

Unit 3 Summative Design Project - Phobos Moon Religion Cave

It is the Year 2062. Humans have begun to colonize other planets in our solar system, particularly Mars and Venus. While both planets are inhospitable to humans, a technique known as terraforming is going to be used to transform both planets into friendlier environments for humans. The process will take over 44 years and involve an intergenerational effort. For the Mars project, an advance base is being set up on one of Mars' two moons, Phobos. The entire base is being built underground. It will be crowded with hundreds of experts and their families. By agreement, space has been set aside in the plan to allow for the practice of the religions of the countries that are involved in the project:

United States – Protestant and Roman Catholic Christianity

Russia – Eastern Orthodox Christianity

Israel – Reform and Conservative Judaism

Iran – Shia Islam

Saudi Arabia – Sunni Islam

Pakistan – Sunni Islam

The space provided is ironically, is the exactly same size as your 6th grade World Cultures classroom. It is a good thing that you kept your Fall interactive notebook from 2021 all these years. And now the mystery is solved about why he made you measure his classroom and write the dimensions on page 94. What ever happened to that teacher?

Your design can be done from a top-down view, a 3d perspective view, or from a side view.

It can be on the 11x17 paper (available in my room), which will be submitted in person.

You can use digital design tools as well, and if need be can turn in a word doc in the drop box in the HUB if you wish. If you are using an open architecture gaming platform, like Minecraft, either make screen captures or a video tour that you can post on a video hosing site like Youtube or Vimeo.

Required Elements:

- Elements from all of the religions listed above should be present and labeled.
- Drawn projects can be in black ink and colored (think of map standards).
- The room on Phobos is laser cut from solid rock. The door is in the same place as my classroom door. You can lac things in front of the walls and paint them.
- It is up to your creativity to decide how to get all of these religions to work in the same space.
-

Due on Wednesday, Feb. 9th for "A" classes and Thursday, Feb. 10th for "B" classes.
